Soils classified as A-4 and A-5 including sandy silts, fine silty sand or lean clays are highly susceptible to frost
- F. In-situ soils meeting the requirements outlined in these specifications may be utilized as subgrade shall be scarified to a minimum depth of 8-inches below finish subgrade, recompacted and tested as described below. Fill material for subgrade shall be placed in lifts not to exceed 8-inches compacted depth.
- G. Methods and procedures for establishing the total depth of soil replacement and/or modification shall be as specified by the design engineer and geotechnical investigations. The adequacy of in-situ soils and fill materials as pavement subgrade shall be evaluated based upon the soils classification, liquid
- H. Soils with a liquid limit greater than 40, or a plasticity index greater than 15 shall be undercut and removed from the street section or improved by a design method of stabilization approved by the City.
- I. Quality control testing shall be as specified below.

DETENTION POND MAINTENANCE PLAN

The detention pond is located along the north boundary of the property. The modifications are designed to temporarily detain stormwater to meet the City of Bryant's water quantity criteria before discharging from the pond.

Routine Maintenance

Routine maintenance will include but not be limited to:

- -The primary discharge (1 HDPE Pipe) from the pond and other areas will be inspected monthly for debris which could inhibit the proper flow of discharge. Any debris will be removed immediately and disposed of or placed in a location to prevent future
- maintenance and to not cause impact up or downstream of the structure. -Trash will be removed from around the pond to prevent entering the pond. Generally, the site should be kept free of loose trash
- which could be carried off site by wind or rain. -Inspect the pond and discharge weir for non-routine maintenance need.

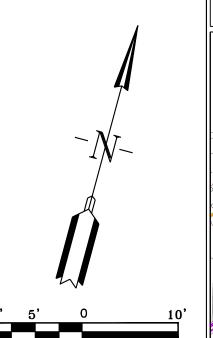

Periodic or Non-Routine Maintenance

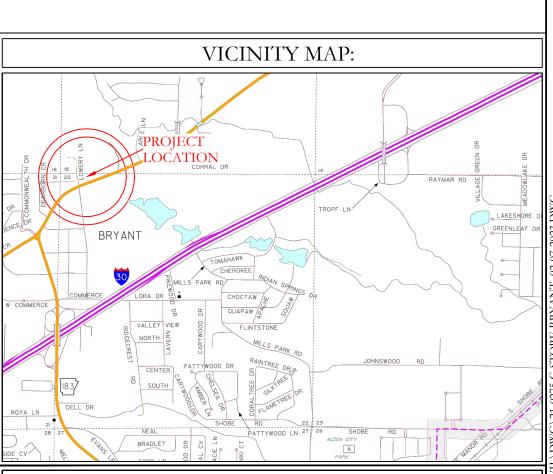

- The routine inspection of the pond area and discharge weir will identify needed repairs and non-routine maintenance. These items may include but not be limited to:
- -Bottom of pond will be sodded (except where trickle channel is located).
- -Embankments sloped 2:1 will be concrete stabilized, 3:1 slopes shall be sodded -Re-growth of trees on or around the pond bank shall be cut and removed from the pond area.
- -Stabilization of slopes may be required periodically or after excessive rain events. Any disturbance of slopes should be reseeded
- or may require installation of erosion control materials until seeding can reestablish adequate grasses to prevent future erosion. -Any other maintenance or repairs which would minimize other maintenance to the pond or outfall structures.

For questions or concerns about the pond, contact ___ at 501-____.

EARTHEN SLOPE NOTE: ALL EARTHEN DETENTION POND SLOPES ON BOTH THE INTERIOR AND EXTERIOR OF THE POND SHALL HAVE A MAXIMUM SLOPE OF 3:1.

- 1. DETENTION POND WILL BE REQUIRED TO BE STABILIZED WITH SOLID SOD STABILIZATION PER THE STORM WATER MANAGEMENT MANUAL.
- 2. DETENTION POND WILL HAVE A 5' WIDE LEVEE.
- 3. DRAINAGE DITCH LEADING TO NEW DETENTION POND WILL REQUIRE SOLID SOD STABILIZATION PER THE STORM WATER MANAGEMENT MANUAL.
- 4. DETENTION POND WILL REQUIRE CONCRETE TRICKLE CHANNELS.

MARKETPLACE EAST PHASE 1 BRYANT REALTY COMPANY, LLC DRAINAGE CALCULATIONS – SUMMARY 2/6/2023

DESCRIPTION OF PROJECT

Marketplace east phase 1 is an approximately 7.11 Acre development located in the City of Bryant, Arkansas approximately a quarter mile north of Market Place Avenue. There are two ridges that run through the site creating three main drainage basins. There is one large drainage basin among three basins that flows to pond on south side. There is an existing gravel road and 635 linear feet of gravel road is replaced by paved road.

Stormwater Calculations were prepared with the intent to comply with the City of Bryant's Drainage Code. Hydraulic calculations were made using the Rational Method. Design frequencies were analyzed for 2, 5, 10, 25, 50, and 100 year return periods.

These calculations are divided into the following sections:

Summary of Drainage Basins

Summary of Inlets

Summary of Pipes

Appendices

Exhibit A – Pre-Development Drainage Basins

Exhibit B – Post-Development Drainage Basins

MARKETPLACE EAST PHASE 1 BRYANT REALTY COMPANY, LLC DRAINAGE CALCULATIONS – SUMMARY 2/6/2023

SUMMARY OF DRAINAGE BASINS

Basin 1 drains to western side and Basin 3 drains to eastern side of the site. Basin 3 and 4 is developed. Basin 2 is drained to a pond which is located in the south side of the site. There is no significant change between pre and post development discharges.

SUMMARY OF INLETS

On the drainage plan you will see labels for all of the inlets for these calculations. The flows shown are for the 10-year return storm. The distance from the face of the curb to the center of the street is 15 feet.

SUMMARY OF PIPES

All pipes used in this project are HDPE or RCP. Therefore, a manning's of 0.012 was used on all pipes in the analysis.

Diamond Estates Subdivision DRAINAGE CALCULATIONS – SUMMARY 2/8/2023

DESCRIPTION OF PROJECT

Diamond Estates Subdivision is an approximately 14.90 Acre development located in the City of Bryant, Arkansas, north of Highway 5 and east of Midland Road. There is one large drainage basin that flows to north. Discharges will not be detained and in-lieu-fee will be provided for this detention.

Stormwater Calculations were prepared with the intent to comply with the City of Bryant's Drainage Code. Hydraulic calculations were made using the Rational Method. Design frequencies were analyzed for 2, 5, 10, 25, 50, and 100 year return periods.

These calculations are divided into the following sections:

Summary of Drainage Basins

Summary of Inlets

Summary of Pipes

Appendices

Exhibit A – Pre-Development Drainage Basins

Exhibit B – Post-Development Drainage Basins

Diamond Estates Subdivision DRAINAGE CALCULATIONS – SUMMARY 2/8/2023

SUMMARY OF DRAINAGE BASINS

There is only a drainage basin that flows to north. This discharge will not be captured. In-Lieu-fee is provided for detention. In-lieu-fee calculation is prepared based on the City of Bryant's Drainage Code.

SUMMARY OF INLETS

On the drainage plan you will see labels for all of the inlets for these calculations. The flows shown are for the 10-year return storm. The distance from the face of the curb to the center of the street is 15 feet.

SUMMARY OF PIPES

All pipes used in this project are HDPE or RCP. Therefore, a manning's of 0.012 was used on all pipes in the analysis.

OINT TRE	ATMENT NOTES	-

A. THE JOINT TREATMENT SCHEDULE IS INTENDED TO ILLUSTRATE ALL JOINT CONDITIONS WHICH ARE MEANT TO BE SEALED WHETHER REFERENCED FROM OTHER DETAILS OR NOT.

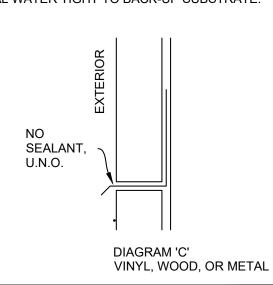

B. AT METAL FRAME LOCATIONS (DOORS, WINDOWS, ETC.) HOLD FRAME BACK FROM SUBSTRATE 3/8" @ HEAD & SILL AND 3/16" @ JAMB TO ALLOW FOR SEALANT, TYPICAL U.N.O. THIS INCLUDES DIMENSIONS FOR STEEL LINTELS WHERE APPLICABLE.

C. PROVIDE PROPER SEALERS AS REQUIRED TO FULLY CLOSE JOINTS THAT ARE INTENDED TO BE TIGHT AND AS SHOWN ON THE DRAWINGS.

D. PROVIDE CLOSED CELL BACKER ROD AS REQUIRED TO ACHIEVE PROPER SEALANT THICKNESS PER MANUFACTURER'S INSTALLATION INSTRUCTIONS.

E. CAUTION, DO NO SEAL WEEPS AND DRAINAGE CHANNELS IN STOREFRONT OR OTHER ASSEMBLIES.

- A. PROPERLY WEEP FLASHING POINTS AND NORMAL DRAINAGE POINTS WITH WEEPS @ 1'-4" O.C. MAX. SPACING. WEEP POINTS ARE TO BE LOCATED DIRECTLY ON TOP OF FLASHING.
- B. WHERE FLASHING IS LOCATED TERMINATE AND/OR SEPARATES MATERIALS, DO NO SEAL (U.N.O.) REFER TO DIAGRAM "C" WHERE IT IS DETERMINED BY THE MATERIAL MANUFACTURER OR OTHERWISE
 THAT SEALING IS REQUIRED (TO PREVENT WATER PENETRATION BEYOND FLASHING DUE TO WIND
 DRIVEN RAIN), THEN SEALANT MUST BE WEEPED IN ACCORDANCE WITH NOTE "A" ABOVE.
- C. UNLESS NOTED OTHERWISE, TURN FLASHING UP A MIN. OF 4" BEHIND APPROPRIATE MATERIALS.
- D. FLASHING CONDITIONS, WHETHER DETAILED OR NOT, ARE TO BE IN ACCORDANCE WITH S.M.A.C.N.A. SPECIFICATIONS. WHERE ATYPICAL CONDITIONS OCCUR THAT ARE NOT DETAILED, FLASHING IS TO BE INSTALLED AS CLOSELY AS POSSIBLE TO THE S.M.A.C.M.A. DETAIL THAT IS MOST CLOSELY APPROXIMATES THE ACTUAL CONDITION.
- E. UNLESS NOTED OTHERWISE, AT FLASHING HIGH POINTS SEAL WATER TIGHT TO BACK-UP SUBSTRATE.
