# Stormwater Pollution Prevention Plan (SWPPP) for Construction Activity for Small Construction Sites

# National Pollutant Discharge Elimination System (NPDES) General Permit # ARR150000

Prepared for:

**Anchor Realty** 

Date:

May 9, 2023

Prepared by:

Bond Consulting Engineers, Inc.

Project Name and Location: Reynolds Centre Commercial Expansion

Property Parcel Number (Optional): 840-12104-003

Operator Name and Address: Anchor Realty Investments, LLC

102 Country Club Parkway

Maumelle, AR 72113

## A. Site Description

- a. Project description, intended use after NOI is filed: The site will be the home of a new commercial building in an existing development.
- b. Sequence of major activities which disturb soils:
  - a. Installation of erosion control measures
  - b. Clear and grub underbrush
  - c. Mass earth work
  - d. Install storm drainage infrastructure
  - e. Grade area to drain
  - f. Periodically remove accumulated sediment from around silt fences and other areas
  - g. Obtain vegetation around completed structures
  - h. Stabilization of disturbed soils
  - i. Removal of erosion control measures, as needed
- c. Total Area: 1.06 ac

Disturbed Area: 1.06 ac

#### B. Responsible Parties

Be sure to assign all SWPPP related activities to an individual or position; even if the specific individual is not yet known (i.e. contractor has not been chosen).

Individual/Company	Phone Number	Service Provided for SWPPP (i.e., Inspector, SWPPP revisions, Stabilization Activities, BMP Maintenance, etc.)
Erosion Control Contractor	n/a	All SWPPP Services

#### C. Receiving Waters

- a. The following waterbody (or waterbodies) receives stormwater from this construction site: <u>An unnamed tributary of Crooked Creek; thence into Crooked Creek; thence into Fourche Creek; thence into the Arkansas River.</u>
- b. Is the project located within the jurisdiction of an MS4? Xes No

	i. If yes, Name of MS4: City of Bryant	
Э.	Ultimate Receiving Water:	
	Red River	White River
	Ouachita River	St. Francis River
	Arkansas River	Mississippi River

- D. Site Map Requirements (Attach Site Map):
  - a. Pre-construction topographic view;
  - Direction of stormwater flow (i.e., use arrows to show which direction stormwater will flow) and approximate slopes anticipated after grading activities;
  - c. Delineate on the site map areas of soil disturbance and areas that will not be disturbed under the coverage of this permit;
  - d. Location of major structural and nonstructural controls identified in the plan;
  - e. Location of main construction entrance and exit;
  - f. Location where stabilization practices are expected to occur;
  - g. Locations of off-site materials, waste, borrow area, or equipment storage area;
  - h. Location of areas used for concrete wash-out;
  - i. Location of all surface water bodies (including wetlands) with associated natural buffer boundary lines. Identify floodplain and floodway boundaries, if available;
  - Locations where stormwater is discharged to a surface water and/or municipal separate storm sewer system if applicable,
  - k. Locations where stormwater is discharged off-site (should be continuously updated);
  - Areas where final stabilization has been accomplished and no further construction phase permit requirements apply;
  - m. A legend that identifies any erosion and sediment control measure symbols/labels used in the site map and/or detail sheet; and
  - n. Locations of any storm drain inlets on the site and in the immediate vicinity of the site.

#### E. Stormwater Controls

- a. Initial Site Stabilization, Erosion and Sediment Controls, and Best Management Practices:
  - i. Initial Site Stabilization: <u>1.06 acres of area will be disturbed over the duration of the project.</u> Construction of streets, water, sanitary sewer, gas, electric, phone, and cable shall be the areas initially disturbed.

	11.	Erosion and Sediment Controls: Silt fencing around the site, concrete
		washout areas, and construction entrances will be installed before construction begins.
	iii.	If periodic inspections or other information indicates a control has been
		used inappropriately or incorrectly, the operator will replace or modify
		the control for site situations: Yes No
		If No, explain:
	iv.	Off-site accumulations of sediment will be removed at a frequency
		sufficient to minimize off-site impacts: Xes No
		If No, explain:
	V.	Sediment will be removed from sediment traps or sedimentation ponds
		when design capacity has been reduced by 50%: XYes No
		If No, explain:
	vi.	Litter, construction debris, and construction chemicals exposed to
		stormwater shall be prevented from becoming a pollutant source for
		stormwater discharges: XYes No
		If No, explain:
	vii.	Off-site material storage areas used solely by the permitted project are
		being covered by this SWPPP: ☐Yes ☒No
		If Yes, explain additional BMPs implemented at off-site material storage area:
	G. 1.11	
р.		zation Practices
	l.	Description and Schedule: <u>During construction of streets</u> , <u>utilities</u> , <u>sidewalks</u> ,
		and buildings, surrounding vegetation will be disturbed as required. After streets and utilities are installed, the areas that will no longer be disturbed will
		be seeded and BMP's installed until vegetation growth.
	ii.	Are buffer areas required? Yes No
		If Yes, are buffer areas being used? Yes No
		If No, explain why not:
		If Yes, describe natural buffer areas:

iii.	A record of the dates when grading activities occur, when construction
	activities temporarily or permanently cease on a portion of the site, and
	when stabilization measures are initiated shall be included with the plan.
	⊠Yes □ No
	If No, explain:
iv.	Deadlines for stabilization:
	1. Stabilization procedures will be initiated 14 days after
	construction activity temporarily ceases on a portion of the site.
	2. Stabilization procedures will be initiated immediately in portions
	of the site where construction activities have permanently ceased
c. Struc	tural Practices
i.	Describe any structural practices to divert flows from exposed soils, store
	flows, or otherwise limit runoff and the discharge of pollutants from
	exposed areas of the site: Silt fence barriers are being used around all
	exposed areas of the site that may be adversely affected by errant water flows.
ii	Describe Velocity Dissipation Devices: No areas of the site are expected to
	have high velocity flow, however the silt fences will be placed in such a way to
	retard any flows that may occur.
iii	. Sediment Basins:
	Are 10 or more acres draining to a common point? $\square$ Yes $igttee$ No
	Is a sediment basin included in the project? $\Box$ Yes $igotimes$ No
	If Yes, what is the designed capacity for the storage?
	3600 cubic feet per acre = :
	or
	10 year, 24 hour storm = :
	Other criteria were used to design basin:
	If No, explain why no sedimentation basin was included and
	describe required natural buffer areas and other controls
	implemented instead: The site is an existing incomplete commercial
	development. The entirety of the site is planned for use either for
	buildings, roads or parking. The silt fencing will be sufficient to control
	any stormwater flows coming from the site.
F. Other Contr	ols
	materials, including building materials, shall be prevented from being
	narged to Waters of the State: $\boxtimes$ Yes $\square$ No
uisci	ialged to waters of the State. Mies Mino

	b.	Off-site vehicle tracking of sediments and the generation of dust shall be
		minimized through the use of:
		A stabilized construction entrance and exit
		Vehicle tire washing
		Other controls, describe:
	c.	Temporary Sanitary Facilities: Portable toilets will be available and shall be located
		away from any anticipated storm water flow. The contractor is responsible for regular
		cleaning of the portable toilets. All waste will be disposed of in proper waste
	d.	Concrete Waste Area Provided:
		⊠Yes
		No. Concrete is used on the site, but no concrete washout is provided.
		Explain why:
		N/A, no concrete will be used with this project
	e.	Fuel Storage Areas, Hazardous Waste Storage, and Truck Wash Areas: No fuel
		storage or hazardous materials are anticipated on this project. However, no
		contaminants from fuel storage, hazardous materials, and truck washing shall be
		discharged to waters of the State. If truck washing occurs, then the water must be
		collected and contained and pumped out as required by a licensed operator for this type
		of operation.
G.	Non-S	tormwater Discharges
	a.	The following allowable non-stormwater discharges comingled with stormwater
		are present or anticipated at the site:
		Fire-fighting activities;
		Fire hydrant flushings;
		Water used to wash vehicles (where detergents or other chemicals are
		not used) or control dust in accordance with Part II.A.4.H.2;
		Potable water sources including uncontaminated waterline flushings;  Landscape Irrigation;
		Routine external building wash down which does not use detergents or
		other chemicals;
		Pavement wash waters where spills or leaks of toxic or hazardous
		materials have not occurred (unless all spilled materials have been removed)
		and where detergents or other chemicals are not used;
		Uncontaminated air conditioning, compressor condensate (See Part
		I.B.12.C of the permit);,
		$igstyle{igstyle}$ Uncontaminated springs, excavation dewatering and groundwater (See
		Part I.B.13.C of the permit);
		Foundation or footing drains where flows are not contaminated with
		process materials such as solvents (See Part I.B.13.C of the permit);

b. Describe any controls associated with non-stormwater discharges present at the site: The controls already in use on the site will be sufficient to contain any non-stormwater discharges on the site.

Н.	any rev	able State or Local Programs: The SWPPP will be updated as necessary to reflect visions to applicable federal, state, or local requirements that affect the vater controls implemented at the site. $\square$ Yes $\square$ No
I.	Inspect	cions
	a.	Inspection frequency:
		Every 7 calendar days
		or
		At least once every 14 calendar days and within 24 hours of the end of a
		storm even 0.25 inches or greater (a rain gauge must be maintained on-site)
	b.	Inspections:
		Completed inspection forms will be kept with the SWPPP.
		ADEQ's inspection form will be used (See Appendix B)
		or
		A form other than ADEQ's inspection form will be used and is attached
		(See inspection form requirements Part II.A.4.L.2)
	c.	Inspection records will be retained as part of the SWPPP for at least 3 years from
		the date of termination.
	d.	It is understood that the following sections describe waivers of site inspection

- accordance with the referenced sections.

  i. Winter Conditions (Part II.A.4.L.4)
  - ii. Adverse Weather Conditions (Part II.A.4.L.5)

### J. Maintenance:

The following procedures to maintain vegetation, erosion and sediment control measures and other protective measures in good, effective operating condition will be followed: The site erosion control measures will be checked periodically by site personnel and by the inspector during his visits. Any measures deemed deficient will be identified and appropriate repairs will be initiated.

requirements. All applicable documentation requirements will be followed in

Any necessary repairs will be completed, when practicable, before the next storm event, but not to exceed a period of 3 business days of discovery, or as otherwise directed by state or local officials.

## K. Employee Training:

The following is a description of the training plan for personnel (including contractors and subcontractors) on this project: All job foremen and inspectors will be taught how to recognize deficiencies and failures in the erosion control structures. They will be taught how to maintain any erosion control measures in place on the site, and will be instructed in how to lead workmen in maintaining and repairing said structures. They will be instructed to immediately contact job supervisors for consultation if there are any problems with the erosion control measures.

\*\*Note, Formal training classes given by Universities or other third-party organizations are not required, but recommended for qualified trainers; the permittee is responsible for the content of the training being adequate for personnel to implement the requirements of the permit.

#### Certification

"I certify under penalty of law that this document and all attachments such as Inspection Form were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

**ARR150000 Inspection Form** 

Appendix A

The BMPs listed here should be considered for every project. Those BMPs that are not included in the SWPPP should be checked as "Not Used" with a brief statement describing why it is not being used.

Note: Appendix B and C do not have to be submitted with the SWPPP. These attachments are for use during the development of the SWPPP.
